

Different Folder Views

One of the strengths of the 2N Media Library is the number of ways the user can view its content.

“Thumbnails” View

In the “Thumbnails” view you’ll see a preview of the file’s contents without having to open them. This might be handy especially for pictures and photos.

01

“Details” View

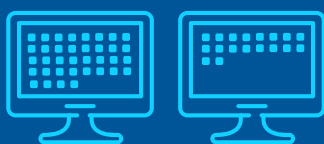

“Details” shows you several columns of information like Name, Date, Type, Size and at the end an option to download the file.

02

“Icons” View

If you don’t care about details, use the “Icons” view. As its name indicates, all you will see only folders and files, each with their specific icon.

03

Items per Page

Also, in the right corner you can change a number of items in the view.

04
